

Upgrade Solution

What is a Vector 11-75kW ?

The Control Techniques Vector drive was a fully integrated, closed loop drive that would enable standard AC motors to achieve the same high performance characteristics as conventional regenerative DC motor drives.

It was available in several models that could control 3-phase motors from 15 to 100HP and accept a line voltage of 380V to 480V +/-10%.

What replaces Vector 11-75kW?

The Unidrive SP is an excellent replacement for the original Vector drive. The UnidriveSP family of drives offer many more internal features and can be setup using your Laptop PC. No pots to adjust or jumpers to set. Software for the Unidrive SP is free !

If serial communication was being used, some adaptation may be required for the upgrade.
